cancers arthritis and pain. New human VR3 receptor useful for the treatment of disorders including

Claim 11; Fig 8; 104pp; English.

The patent relates to human vanilloid receptor VR3 polynucleotide and polypeptide. Three isoforms of VR3 namely VR3A+B-, VR3A-B- and VR3A+B+ have also been disclosed. The VR3 polypeptide is used to identify its modulators which are useful for the treatment of inflammatory conditions and for use as analgesics for intractable pain associated with postherpetic neuralgia, diabetic neuropathy, postmastectomy pain, complex regional pain syndromes, arthritis (e.g. rheumatoid and osteoarthritis), ulcers, neurodegenerative diseases, asthma, chronic

cancer), comprises monitoring Identifying an agent that modulates intracellular calcium levels, useful for treating diseases associated with calcium dysregulation (e.g. cancer), comprises monitoring the effects of the agent on store-operated calcium entry.

Disclosure; SEQ ID NO 76; 55pp; English

cc intracellular calcium comprises monitoring the effects of the agent on cortecilular calcium entry comprising contacting one or more test cells cor their portion comprising one or more proteins that is (are) at least cabout 35% homologous to the protein encoded by Drosophila gene CG4536 or CG CG5842 over at least about 40% of the encoded protein (and that provides Cf for store-operated calcium entry with a test agent), where the portion of the cell comprises the proteins, monitoring the effect(s) of the test compound on store-operated calcium entry and identifying a test agent as an agent if it has an effect on store-operated calcium entry. Also cincluded are a method of modulating store-operated calcium entry comprising modulating the level of, expression of, activity of or compound on store-operated calcium entry. Where the protein is a cell that has altered store-operated calcium entry, where the protein is at least about 35% cover at least about 40% of the encoded by Drosophila gene CG4536 or CG5842 cover at least about 40% of the encoded by Drosophila gene CG4536 or CG5842 cover at least about 40% of the encoded by Drosophila gene CG4536 or CG5842 cover at least about 40% of the encoded by Drosophila gene CG4536 or CG5842 cover at least about 40% of the encoded by Drosophila gene CG4536 or CG5842 cover at least about 40% of the encoded by Drosophila gene CG4536 or CG5842 cover at least about 40% of the encoded by Drosophila gene CG4536 or CG5842 cover at least about 40% of the encoded by Drosophila gene CG4536 or CG5842 cover at least about 40% of the encoded by Drosophila gene CG4536 or CG5842 cover at least about 40% of the encoded by Drosophila gene CG4536 or CG5842 cover at least about 40% of the encoded by Drosophila gene CG4536 or CG5842 cover at least about 40% of the protein and that provides for CG Estat about 40% of the protein sate least about 40% or CG5842 cover at least about 40% of the continued above, thus, and the protein and that provides appearing as the protein does not contain the con The invention relates to identifying an agent that modulates

                                                                    Vanilloid receptor protein and its DNA are useful for identifying compounds which modulate vanilloid receptors in human tissues, which are useful for treating various disease states, including neuropathic pain, inflammation, arthritis, rhinitis, pruritus, bladder dysfunction, cluster headache, wound healing and psoriasis. Vanilloid receptor DNA is useful as standard or reagent in diagnostic immunoassays, as targets for pharmaceutical screening assays and also in gene therapy. Vanilloid receptor protein is useful for detecting the presence of anti-vanilloid receptor derived polypeptide in test samples. Vanilloid receptor sectived polypeptide in test samples. Vanilloid receptor sections are useful for detecting vanilloid receptor polypeptides, for screening for diseases or conditions associated with abnormal vanilloid receptor production, treating disorders involving capsaicin-sensitive ion channels and as diagnostic markers
                                                     Sequence
                                                                                                                                                                                                                                                                                           Novel human vanilloid receptor gene and encoded polypeptides for identifying compounds that modulate vanilloid receptors in human tissues and for treating inflammation, arthritis, psoriasis and wound healing.

and pain disorders. receptor 3 (VR-3) and VR-5, useful for screening modulators of VR-3 or VR -5 and for treating calcium homeostasis related disorders (e.g. dementia)

Claim 13; Fig 2A-C; 167pp; English.

The invention provides nucleic acid encoding human ion channels referred to as Vanilloid receptor 3 (VR-3) and VR-5. The VR-3 or VR-5 proteins can be used to screen for naturally occurring VR-3 or VR-5 ligands or for drugs or compound which modulate VR-3 or VR-5 activity. The VR-3 or VR-5 proteins and their modulators (e.g. antisense nucleic acids and anti-VR antibodies) are useful for treating disorders characterized by insufficient or excessive production of VR-3 or VR-5. These disorders are calcium homeostasis related disorders (Alzheimer's disease, dementia, parkinson's disease), pain disorders (diabetic neuropathy, rheumatoid arthritis) and/or cellular growth and/or proliferation disorders (e.g. cancer). Numerous other examples of these disorders are given in the specification. The present sequence represents the human VR-5

                                                                                                                                                                                                                                                                                The present invention relates to a new polypeptide that has a sequence CC 871 amino acids (AAU74935) or 662 amino acids (AAU74936) long, or their variants, as defined in the specification. The polypeptide of the CC invention is deduced from a human nucleic acid 2749 base pairs (ABK14002) CC respectively. The polypeptides of the invention, which are human CC vanilloid receptor-like (VRL) proteins, are used to identify specific CC modulators that are potentially useful for treating pain (of any origin), CC neurodegeneration, stroke, inflammation, asthma, allergy, urogenital CC disorders, incontinence, hypo- or hyper-tension and perivascular disease. The molecules of the invention can also be used to raise specific CC antibodies. The nucleic acid that encodes the polypeptide of the invention is useful for recombinant production of the protein and for preparing transgenic animal models. The polypeptide, antibody and nucleic acid of the invention are also useful as diagnostic agents for CC acid sequence represents the human vanilloid receptor-like protein 2a (CC (VRL-2a) of the invention
                                                                                                                 Query Match

VR4 proteins and polynucleotide sequences can be used in modulating VR4 activity, in gene therapy and in antisense gene therapy. VR4 is useful for the manufacture of a medicament for treating diseases of cartilage and/or bone, or for the treatment of pain associated with it, where the disease is one affecting the larynx, auditory canal, intravertebral discs, ligaments, tendons and joint capsules, or a disease associated with bone development including osteoporosis, or diseases involving joint destruction such as rheumatoid arthritis or osteoarthritis, and the pain is associated with rheumatoid arthritis or osteoarthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Use of vanilloid 4 receptor polypeptide/polynucleotide, a modulator of the polypeptide or an antisense polynucleotide to the polynucleotide, manufacture of a medicament for treating cartilage and/or bone disease

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      片
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                  The present invention relates to a polypeptide of ion channel family polypeptides, vanilrep4 (VR4). The peptides are useful for treating pain (e.g. chronic pain, neuropathic pain, post-operative pain, rheumatoid arthritic pain), neuralgia, neuropathies, algesia, nerve injury, ischemia, neurodegeneration, stroke, incontinence, inflammatory disorders, irritable bowel syndrome, diabetes or obesity. Fragments of the protein are useful for producing full-length polypeptides by peptide synthesis therefore the variants may also by employed as intermediate for producing full-length polypeptide. The proteins are also useful for identifying agonists or antagonists of peptide activity and expression. The peptide is useful as disease by detecting mutations in the associated gene, and is also useful for chromosome localization studies and tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  vanilrep4; VR4; Analgesic; cerebroprotective; antiinflammatory;

expression studies. The peptide is useful for producing transgenic animals, which include knock-in animals (in which an animal gene is replaced by human equivalent within the genome of the animal), useful drug discovery process, for target validation, where the compound is specific for human target. Peptides and Ab is useful for configuring screening methods for detecting the effect of added compounds on the production of mRNA in cells. The peptides are useful as vaccines for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Polypeptide of ion channel family polypeptides, designated vanilrep4, useful as a vaccine for inducing immune response against diseases suc neuropathies, algesia, nerve injury, ischemia, stroke, incontinence,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    04-JUL-2000; 2000EP-00202352
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      09-JAN-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         VANILREP4

New isolated TRPV3, TRPV4 or TRPM8 vanilloid receptor nucleic molecule and polypeptides, useful for the diagnosis and treatm disorders such as pain, inflammation, skin diseases and cancer treatment cancer. O.

SEQ ID NO 17; 197pp; English.

acids and encoded proteins thereof. Specifically, it refers to certain members of the VR family that are involved in pain perception, in particular, TRPV3 (previously known as VRLS, VRLX, VR4 & TRPV1), TRPV4 (previously known as VRL3 & OTRPC4) and TRPM8 (previously known as TRPX). Furthermore, this invention includes trkA+ pain specific genes expressed in the sensory neurons of the dorsal root ganglia. Accordingly, such compositions can be useful for the diagnosis, treatment and prevention of pain, inflammation, skin disorders and cancer, and so exhibit analgesic, antiinflammatory, dermatological and cytostatic activities. This polypeptide sequence is the human TRPV4 protein of the invention. invention relates to novel vanilloid receptor (VR) related nucleic and encoded proteins thereof. Specifically, it refers to certain

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Osteopathic; antiinflammatory; antirheumatic; antiarthritic; gene therapy; type II collagen; expression; cartilage disease; osteoarthritis; cartilage defect; rheumatoid arthritis; human.
The invention relates to a purified protein (I) that promotes type II collagen expression. Also disclosed is an isolated polynucleotide encoding (I), a recombinant vector comprising the polynucleotide and gene therapeutic agent comprising the recombinant vector as an active
                                                                                                                                                                                                                                                                                                                                                                                                                                  16-APR-2002;

CC intracellular calcium entry comprising ontacting one or more test cells or their portion comprising one or more proteins that is (are) at least cor their portion comprising one or more proteins that is (are) at least cor about 35% homologous to the protein encoded by Drosophila gene CG4536 or CC G5842 over at least about 40% of the encoded protein (and that provides CC included are a method of modulating, monitoring the effect(s) of the test agent if it has an effect on store-operated calcium entry and identifying a test agent as compound on store-operated calcium entry also compound on store-operated calcium entry. Also compound on store-operated calcium entry (comprising modulating the level of, expression of, activity of or comprising modulating the level of, expression of, activity of or compound or interactions of a protein in a cell that has altered store-operated calcium entry, where the protein is at least about 35% noncloquals to the protein encoded by Drosophila gene CG4536 or CG5842 over at least about 40% of the encoded protein and that provides for store-operated calcium entry, and where store-operated calcium transport comprising molecules involved in modulating sene CG4536 or CG5842 over at least about 40% of the encoded protein and that provides for comprising a molecule that interacts with the protein mentioned above, thus, it is protein shown that protein that provides for store-operated calcium transport comprising molecules involved in modulating store-operated calcium transport comprise the protein are selected from ion transport comprise the protein selection. These may be used in treating comprise the protein selection of the two above mentioned drosophila proteins.

CC glomerulonephritis). The present sequence represents an

CC intracellular calcium comprises monitoring the effects of the agent on
CC store-operated calcium entry comprising contacting one or more test cells
CC or their portion comprising one or more proteins that is (are) at least
about 35% homologous to the protein encoded by Drosophila gene CG4536 or
CC G5842 over at least about 40% of the encoded protein (and that provides
CC in store-operated calcium entry with a test agent), where the portion of
CC compound on store-operated calcium entry and identifying a test agent as
CC an agent if it has an effect on store-operated calcium entry
CC included are a method of modulating store-operated calcium entry
CC included are a method of modulating store-operated calcium entry
CC comprising modulating the level of, expression of, activity of or
CC included are a method of modulating store-operated calcium entry
CC comprising modulating the level of, expression of, activity of or
CC included are a method of modulating store-operated calcium entry
CC over at least about 40% of the encoded by Drosophila gene CG4536 or CG5842
CC over at least about 40% of the encoded by Drosophila gene CG4536 or CG5842
CC over at least about 40% of the encoded by Drosophila gene CG4536 or CG5842
CC into the cell is modulated) and method of identifying a molecule that
CC into the cell is modulated and in method of identifying a molecule that
CC into the cell is modulated and method of identifying a molecule that
CC into the cell is modulated and method of identifying a molecule that
CC into the colling into contain the contiguous sequences appearing as
CC identifying molecules involved in modulating store-operated calcium
CC ablieve that intracellular calcium. These may be used in transport
CC diseases associated with calcium dysregulation, such as neurodegenerative
CC diseases (e.g. Alzheimer's disease or Parkinson's disease), inflammatory
CC diseases (e.g. asthma or rheumatoid arthritis), cancer, liver diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The invention relates to modulating mechanoreception/mechanosensation in CC a mammal by administering a vanilloid receptor-related osmotically CC activated channel (VR-OAC) polypeptide, its active fragments or portions, CC or by introducing a nucleic acid vector capable of expressing the VR-OAC CC polypeptide. The method of the invention is useful for modulating CC mechanoreception or mechanosensation, for diagnosing, preventing or CC treating e.g. hearing disorders, Human Immunodeficiency virus (HIV), CC obesity, vertigo of labyrinthine origin including motion sickness, CC neurological disorders including ataxia, male infertility, immune CC dysfunction, diabetes mellitus, chronic obstructive lung disorder; CC bronchial asthma, sexual dysfunction, blindness due to corneal or retinal causes, or skin disorders including psoriasis. Other conditions include arterial hypertension, kidney diseases, pain syndromes, Alzheimer's CC disease and other dementias, hydrocephalus, alopecia, baldness and CC cancer. The VR-OAC may be used in detecting or assessing osmotic and cechanical stimuli, or as the facilitating component in translating an osmotic or mechanical stimulus in nano-technological, biosensor or cc biorobotic devices. The current sequence represents the amino acid sequence of human VR-OAC as determined from HEX293 cells. NOTE: The creating these polypeptides which are referred to as SEQ ID's 5, 6, 7, 8 and is criven.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cc into the cell is modulated) and a method of identifying a molecule that comproved the provides for store-operated calcium entry (comprising identifying a complecule that interacts with the protein mentioned above, thus, completely imposed the protein modulating store-operated calcium comparity. The protein does not contain the conciguous sequences appearing as compared that interactly in a modulating, or in identifying agents compressed that modulate, intracellular calcium. These may be used in treating compared that modulate, intracellular calcium. These may be used in treating compared to the modulate of the calcium dysregulation, such as neurodegenerative compared (e.g. Alzheimer's disease or Parkinson's disease), inflammatory compared (e.g. asthma or rheumatoid arthritis), cancer, liver diseases (e.g. asthma or rheumatoid arthritis), cancer, liver diseases (e.g. hepatitis or cirrhosis) or kidney diseases (e.g. compared the two above mentioned drosophila proteins.

                                                                                                                                                                                                                                                                                                                                                                                    The invention comprises the amino acid and coding sequences of novel proteins. The DNA and protein sequences of the invention are useful as: markers for tissues in which the corresponding protein is preferentially expressed; as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes or to map related gene positions; and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present amino acid sequence represents a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          10-DEC-2001;

Sequence 25, Application US/09978303
Patent No. 6790629
PATENT INFORMATION:
APPLICANT: Julius, David J.
APPLICANT: Caterina, Michael J.
APPLICANT: Brake, Anthony J.
TITLE OF INVENTION: Nucleic acid sequences encoding
TITLE OF INVENTION: Polypeptides and uses thereof
FILE REFERENCE: UCALO84CON
CURRENT APPLICATION NUMBER: US/09/978,303
CURRENT APPLICATION NUMBER: 09/235,451
PRIOR PILING DATE: 1998-01-22
PRIOR APPLICATION NUMBER: 09/235,451
PRIOR FILING DATE: 1998-01-22
PRIOR APPLICATION NUMBER: 09/235,451
PRIOR FILING DATE: 1997-08-20
NUMBER OF SEQ ID NOS: 48
SOFTWARE: FastSEQ for Windows Version 4.0
